Autosave and Backup

These features can be enabled in your configuration:

They can protect you from data loss by saving your work periodically.
Click on the sub-tab of Files labeled Autosave/Backup

*In this configuration user executed saves overwrite the active file.
Mastercam overwrites a file named Autosave.mcx at 15 minute intervals
Both also write to a series of three incremental backups.*

So what you get is:

- | | |
|--------------------------|------------------|
| (Activefilename).MCX | AUTOSAVE.MCX |
| (Activefilename)@100.MCX | AUTOSAVE@100.MCX |
| (Activefilename)@101.MCX | AUTOSAVE@101.MCX |
| (Activefilename)@102.MCX | AUTOSAVE@102.MCX |

Consider the interval setting carefully so you don't create conflicts with large toolpath calculations
